

PINNACLE

Water Softener

Cation Resin (16% Cross-link)

Removes calcium, magnesium, iron, and many other hard water minerals. In the Pinnacle series we use a special high capacity 16% cross-link resin which is extremely chlorine resistant and also regenerates well with either sodium or potassium chloride.

Garnet

Finer filtering next to washed quartz media base prevents other media from packing around distributor, maximizing flow rates. Also aids in even distribution of water, preventing channeling.

Washed Quartz

Provides solid base for media to rest on, preventing channeling of media and maximizing flow rates.
